

Snowflakes

1. Cut out the hexagon shape below (outer line).
2. Fold the hexagon in half along the dashed line labeled FOLD 1. Keep the grey and white triangle (1/6th of snowflake) visible after each step.
3. Next fold along the dashed line labeled FOLD 2 that extends to the center of the snowflake.
4. Fold along the dashed line labeled FOLD 3, so you are left with a triangle shape with the grey and white snowflake image filling one side.
5. With a small pair of sharp scissors cut away all the grey areas so that only the white areas between the grey patches remain then carefully unfold to reveal your completed snowflake. **Be sure to have an adult help you!**
